

BA/SA improvements and website SEO audit

Prepared 10 September 2026 | Implementation and decision evidence

BA and SA improvement assessment

Scope: Red & Yellow public website, CRM boundary, analytics warehouse, NiFi/Fabric integration and Power BI reporting.

Evidence: read-only website crawl dated 10 September 2026, Salesforce reconciliation, ERD, dbt evidence and the current report model.

What needs business analysis improvement

On-campus and online catalogue pages use different price availability and delivery labels.	Prospective students and reporting users can interpret the same course differently.	Define a catalogue data dictionary for programme, offering, delivery mode, fee, fee status, duration, intake and accreditation. Keep 'Enquire for price' as an explicit status.	Every catalogue row has one delivery mode, one fee status and a source URL/observed date.
The website has 126 sitemap URLs returning non-200, 169 missing descriptions and 435 missing canonicals.	Search traffic and application journeys can break before they reach CRM capture.	Prioritise a sitemap and metadata remediation backlog by traffic, programme value and application intent.	All indexable programme and application URLs return 200/approved redirects and pass the metadata contract.
Funnel terms are easy to read as counts rather than conversion stages.	Marketing, admissions and finance can make different decisions from the same dashboard.	Baseline definitions for lead, contact, opportunity, application, enrolment, agreed revenue, attribution and ROAS; record owner and refresh date.	KPI catalogue and reconciliation show the same denominator and date grain across Power BI, ebook and warehouse.
The modelled populations and live Base Edition Salesforce slice are different.	A reader could mistake synthetic custom-object rows for live CRM records.	Maintain a source-of-truth matrix: Salesforce operational slice, warehouse history, staged sample pack and model outputs.	Every published count names its system, object, filter and as-of date.
Recommendations need a decision owner and a feedback loop.	A score without an action is not an operating process.	Write user stories and acceptance criteria for marketing follow-up, admissions queues, student support and data-quality exceptions.	Each action has an owner, SLA, intervention record and outcome measure.

What needs systems analysis improvement

GA4 can arrive through the Data API or native BigQuery export.	The wrong route creates unnecessary cost or loses raw-event detail.	Specify two supported patterns: Data API -> NiFi -> OneLake for curated metrics; GA4 native export -> BigQuery -> Fabric for raw events. Keep them as separate source contracts.	Route decision, credential boundary, schema and reconciliation test are documented before activation.
Website, GA4, Salesforce and warehouse identifiers are not the same thing.	Joins can overstate campaign performance or expose user-level identifiers.	Use campaign/source/medium/date attribution keys first; keep CRM external IDs and analytics user identifiers in separate zones.	Duplicate, orphan and attribution-multiplication tests pass.

NiFi and Fabric failure states need operational visibility.	A green dashboard can hide a stalled or partially landed batch.	Add run ID, source watermark, row counts, reject counts, retry state, quarantine path and alert owner to each ingestion contract.	A failed-run test produces an alert and a replayable parked batch without duplicate rows.
The SEO audit found 435 pages without JSON-LD and 310 images without alt text.	These are repeatable template defects, not one-off page edits.	Implement page-template controls for title, description, canonical, H1, OG/Twitter, BreadcrumbList and image alt text.	CI or scheduled crawl reports coverage by template and blocks release below the agreed threshold.
Power BI currently needs explicit empty-state and slicer rules.	Blank-only filters look like missing data and mislead users.	Define allowed slicers, null labels, sort order, accessible contrast, text-size minimums and tooltip definitions in the report specification.	No slicer offers only '(Blank)'; visual layout validation and a screenshot review pass.
ML outputs are decision support, not automatic decisions.	A dropout score can create unfair or unexplained interventions.	Document feature cutoff, cohort, model version, calibration, drift checks, human review and appeal path.	Model card, monthly lift/drift review and logged intervention outcomes exist before operational use.

Website-to-CRM-to-Fabric traceability

1. A visitor lands on a programme or application page; GA4 records consented campaign and page events.
2. A form submission creates or updates a Salesforce Lead/Contact using the external ID and duplicate rules.
3. Admissions qualification creates an Opportunity; the warehouse reconciles stage, campaign and date keys.
4. Applications and enrolments remain warehouse entities while the Base Edition org cannot host the proposed custom objects.
5. Power BI reports acquisition, funnel, course demand, learner risk and data quality from tested marts.
6. The SEO crawl, CRM reconciliation and pipeline run logs provide release evidence and a feedback loop.

BA/SA priority backlog

" Now: fix non-200 sitemap entries; publish the catalogue/KPI/source-of-truth dictionaries; remove blank-only slicers; finish Fabric SQL compatibility work.

" Next: add metadata and structured-data template controls; activate the chosen GA4 route; add ingestion observability and a replay test.

" Then: connect website campaign events to CRM attribution; pilot course-risk interventions with human review; measure SEO-to-enquiry and enquiry-to-enrolment lift.

" Governance: review definitions, model drift, data quality and intervention outcomes monthly; keep synthetic demonstration data labelled in every deliverable.

These recommendations describe improvements identified from the analysed website and the implemented platform. They are a delivery backlog, not a claim that website or production CRM changes have already been made.

Website SEO audit

Audit date: 10 September 2026

Site: <https://www.redandyellow.co.za>

Pages in sitemap: 561

Pages returning HTTP 200: 435

Overall status: Foundational SEO is present, but the site has page-template consistency gaps that should be fixed before treating every programme and content page as search-ready.

This is the page-level audit that was previously missing from the ebook. It crawled every URL published in the XML sitemap and checked crawlability, titles, descriptions, canonical links, headings, social tags, structured data, image alt text and mobile viewport markup.

Findings

Critical or high priority

" 126 sitemap URLs did not return HTTP 200 during the crawl. Investigate redirects, server errors and stale sitemap entries before search engines recrawl them. Examples: [/custom](https://www.redandyellow.co.za/custom), [/on-campus/on-campus-degrees](https://www.redandyellow.co.za/on-campus/on-campus-degrees), [/on-campus/on-campus-leadership](https://www.redandyellow.co.za/on-campus/on-campus-leadership), [/on-campus/postgraduate-programmes](https://www.redandyellow.co.za/on-campus/postgraduate-programmes), [/online-ed/advanced-diplomas](https://www.redandyellow.co.za/online-ed/advanced-diplomas), [/online-ed/certificates](https://www.redandyellow.co.za/online-ed/certificates), [/online-ed/degree](https://www.redandyellow.co.za/online-ed/degree), [/online-ed/micro-courses](https://www.redandyellow.co.za/online-ed/micro-courses), [/online-ed/online-ed-artificial-intelligence](https://www.redandyellow.co.za/online-ed/online-ed-artificial-intelligence), [/online-ed/online-ed-creative-communications](https://www.redandyellow.co.za/online-ed/online-ed-creative-communications), [/online-ed/online-ed-data](https://www.redandyellow.co.za/online-ed/online-ed-data), [/online-ed/online-ed-design](https://www.redandyellow.co.za/online-ed/online-ed-design).

" 5 pages have no title tag. Missing titles remove the primary page relevance signal. Examples:

[/application](https://www.redandyellow.co.za/application),
[/application/online](https://www.redandyellow.co.za/application/online),
[/application/submitted](https://www.redandyellow.co.za/application/submitted),
[/on-campus/infopack](https://www.redandyellow.co.za/on-campus/infopack),
[/online-ed/infopack](https://www.redandyellow.co.za/online-ed/infopack).

" 169 pages have no meta description. Add unique 150–160 character descriptions that state the programme or page benefit and location/delivery mode. Examples: [/application](https://www.redandyellow.co.za/application),

[/black-friday](https://www.redandyellow.co.za/black-friday),
[/career-advice](https://www.redandyellow.co.za/career-advice),
[/payment-options](https://www.redandyellow.co.za/payment-options),
[/unleash-remarkable](https://www.redandyellow.co.za/unleash-remarkable),
[/about/research-and-innovation](https://www.redandyellow.co.za/about/research-and-innovation),
[/about/textbook](https://www.redandyellow.co.za/about/textbook),
[/application/online](https://www.redandyellow.co.za/application/online),
[/application/submitted](https://www.redandyellow.co.za/application/submitted),
[/blog/3-focus-areas-ux-design](https://www.redandyellow.co.za/blog/3-focus-areas-ux-design), [/blog/3-steps-for-effective-account-leadership-by-gillian-rightford](https://www.redandyellow.co.za/blog/3-steps-for-effective-account-leadership-by-gillian-rightford), [/blog/3-ways-to-gain-control-of-your-career-in-2023-empowering-yourself-amidst-the-load-shedding-crisis](https://www.redandyellow.co.za/blog/3-ways-to-gain-control-of-your-career-in-2023-empowering-yourself-amidst-the-load-shedding-crisis).

" 435 pages have no canonical link. Add a self-referencing canonical to indexable pages and a deliberate canonical on filtered or duplicate variants. Examples: [/](https://www.redandyellow.co.za/),

[/about](https://www.redandyellow.co.za/about), [/application](https://www.redandyellow.co.za/application),
[/black-friday](https://www.redandyellow.co.za/black-friday), [/blog](https://www.redandyellow.co.za/blog),
[/career-advice](https://www.redandyellow.co.za/career-advice), [/connect](https://www.redandyellow.co.za/connect),
[/corporate](https://www.redandyellow.co.za/corporate), [/events](https://www.redandyellow.co.za/events),
[/executive-education](https://www.redandyellow.co.za/executive-education),
[/find-your-learning-journey](https://www.redandyellow.co.za/find-your-learning-journey),
[/on-campus](https://www.redandyellow.co.za/on-campus).

Warnings

" 107 titles are shorter than 50 characters and 246 exceed 60. Keep the primary phrase and qualification type while removing repeated boilerplate.

" 7 title strings are duplicated across multiple pages. Duplicate groups: Red & Yellow (9); About Red & Yellow Creative School of Business | Our Approach (2); Bursaries | Red & Yellow (2); Red & Yellow Creative School of Business expands into Mauritius and be (2); The connection between creative thinking practical output and theory | (2); The Red & Yellow Creative School of Business named the 1 school in the (2); The rise and rise of content creators in the world of AI | Red & Yello (2)

" 57 descriptions are shorter than 120 characters and 71 exceed 170. Rewrite at the template level so every page earns a useful search snippet.

" 2 pages have no H1 and 425 have more than one H1. Enforce one descriptive H1 per page; use H2 for sections.

" 435 pages lack one or more core Open Graph tags and 435 lack the core Twitter card tags. Add template defaults and page-specific overrides.

" 435 pages expose no JSON-LD structured data. Add Organization/WebSite site-wide and BreadcrumbList; add Course or EducationalOccupationalProgram where the page content supports it.

" 310 images have missing or empty alt text across the crawled pages. Prioritise hero, programme and accreditation images; mark decorative images explicitly empty.

Passing signals

" robots.txt returned HTTP 200 and declares the sitemap: <https://www.redandyellow.co.za/sitemap.xml>.

" The XML sitemap contains 561 URLs, so the site has a discoverable URL inventory.

" 435 of 435 live pages declare a mobile viewport.

" The homepage has a descriptive title and H1, and its visible content clearly describes accredited programmes, online study and campus study. ([homepage])(<https://www.redandyellow.co.za/>)

Recommended fixes

1. Fix sitemap hygiene first: remove stale URLs, resolve non-200 responses and make redirect targets canonical.
2. Create one metadata contract for programme, category, blog and corporate templates: unique title, 150–160 character description, self-canonical, Open Graph/Twitter tags, one H1 and BreadcrumbList JSON-LD.
3. Add programme structured data only where the visible page contains the corresponding course facts; do not mark up prices or accreditation that the page does not show.
4. Improve internal linking from category pages to every programme and from programme pages to the relevant application path, delivery mode and related courses.
5. Add descriptive alt text and explicit dimensions to hero and card images; lazy-load below-fold media.
6. Re-run this crawl after each template release and reconcile the sitemap URL count, HTTP status, metadata coverage and structured-data coverage.

Representative catalogue observations

" The on-campus catalogue is crawlable and exposes programme names, duration and accreditation in visible text, but several entries show Enquire for price; keep price fields blank in analytics when the page does not publish a price. ([on-campus])(<https://www.redandyellow.co.za/on-campus>)

" The online catalogue exposes visible prices and start dates for short courses, which can be captured with source URL and observed date. ([online education])(<https://www.redandyellow.co.za/online-ed>)

Machine-readable results

The companion JSON contains one record for every sitemap URL, including the exact title, description, headings, canonical, social tags, schema types and image checks.

Generated by a read-only crawl; no website changes were made.
